Gross Description	<p>A: Placenta with Fetus, 17 weeks: Positive patient identification is done between the requisition, specimen container and cassettes. The specimen consists of a fetus measuring 13 cm from rump length and 19 cm crown-heel length. The fetus appears to be male. The fetus appears markedly macerated and it weighs 125 gms. Gross examination does not reveal any physical abnormality. No sections will be taken. The placenta measures 10 cm in diameter and 2 cm in thickness. It has a poorly developed cotyledonous architecture and is quite small. Sections of the placenta and the cord are taken in one cassette. Sectioning the cord reveals a three-vessel architecture.</p>		SANTA CLARA VALLEY MEDICAL CENTER
